

APICAL COMPLETED 32MW POWER PLANT IN INDONESIA

Dumai, June 2014 - PT.Sari Dumai Sejati (SDS) under Apical group now has its own on-site power plant to power its daily operations. Consisting of 3 boilers and 2 turbines, this new power plant has a total power generation capacity of 32MW. The project started in 2012 and prior to having its own power plant, SDS has obtained their power from the Perusahaan Listrik Negara (PLN), supplemented by power from gensets running on diesel.

The new power plant would increase the reliability of SDS operations as well as introduce significant cost savings. The completion of this power plant has added to Apical's strong infrastructure support including having their own jetty for convenient loading and transportation, shore storage tanks, a truck fleet, a barge fleet and a water desalination facilities.
